

Oracle SQL Cheat Sheet

SELECT Query

```
SELECT col1, col2
FROM table
JOIN table2 ON table1.col = table2.col
WHERE condition
GROUP BY column_name
HAVING condition
ORDER BY col1 ASC|DESC;
```

SELECT Keywords

DISTINCT: Removes duplicate results	SELECT DISTINCT product_name FROM product;
BETWEEN: Matches a value between two other values (inclusive)	SELECT product_name FROM product WHERE price BETWEEN 50 AND 100;
IN: Matches to any of the values in a list	SELECT product_name FROM product WHERE category IN ('Electronics', 'Furniture');
LIKE: Performs wildcard matches using _ or %	SELECT product_name FROM product WHERE product_name LIKE '%Desk%';

Joins

```
SELECT t1.*, t2.*
FROM t1
join_type t2 ON t1.col = t2.col;
```

Table 1	Table 2
A	A
B	B
C	D

INNER JOIN: show all matching records in both tables.

A	A
B	B

LEFT JOIN: show all records from left table, and any matching records from right table.

A	A
B	B
C	

RIGHT JOIN: show all records from right table, and any matching records from left table.

A	A
B	B
	D

FULL JOIN: show all records from both tables, whether there is a match or not.

A	A
B	B
C	
	D

CASE Statement

Simple Case	CASE name WHEN 'John' THEN 'Name John' WHEN 'Steve' THEN 'Name Steve' ELSE 'Unknown' END
Searched Case	CASE WHEN name='John' THEN 'Name John' WHEN name='Steve' THEN 'Name Steve' ELSE 'Unknown' END

Common Table Expression

```
WITH queryname AS (  
  SELECT col1, col2  
  FROM firsttable)  
SELECT col1,col2..  
FROM queryname...;
```

Modifying Data

Insert	INSERT INTO tablename (col1, col2...) VALUES (val1, val2);
Insert from a Table	INSERT INTO tablename (col1, col2...) SELECT col1, col2...
Insert Multiple Rows	INSERT INTO tablename (col1, col2) VALUES (valA1, valB1) INTO tablename (col1, col2) VALUES (valA2, valB2) SELECT * FROM dual;
Update	UPDATE tablename SET col1 = val1 WHERE condition;
Update with a Join	UPDATE t SET col1 = val1 FROM tablename t INNER JOIN table x ON t.id = x.tid WHERE condition;
Delete	DELETE FROM tablename WHERE condition;

Indexes

Create Index	CREATE INDEX indexname ON tablename (cols);
Drop Index	DROP INDEX indexname;

Set Operators

UNION: Shows unique rows from two result sets.

UNION ALL: Shows all rows from two result sets.

INTERSECT: Shows rows that exist in both result sets.

EXCEPT: Shows rows that exist in the first result set but not the second.

Aggregate Functions

- SUM: Finds a total of the numbers provided
- COUNT: Finds the number of records
- AVG: Finds the average of the numbers provided
- MIN: Finds the lowest of the numbers provided
- MAX: Finds the highest of the numbers provided

Common Functions

- LENGTH(string): Returns the length of the provided string
- INSTR(string, substring, [start_position], [occurrence]): Returns the position of the substring within the specified string.
- TO_CHAR(input_value, [fmt_mask], [nls_param]): Converts a date or a number to a string
- TO_DATE(charvalue, [fmt_mask], [nls_date_lang]): Converts a string to a date value.
- TO_NUMBER(input_value, [fmt_mask], [nls_param]): Converts a string value to a number.
- ADD_MONTHS(input_date, num_months): Adds a number of months to a specified date.
- SYSDATE: Returns the current date, including time.
- CEIL(input_val): Returns the smallest integer greater than the provided number.
- FLOOR(input_val): Returns the largest integer less than the provided number.
- ROUND(input_val, round_to): Rounds a number to a specified number of decimal places.
- TRUNC(input_value, dec_or_fmt): Truncates a number or date to a number of decimals or format.
- REPLACE(whole_string, string_to_replace, [replacement_string]): Replaces one string inside the whole string with another string.
- SUBSTR(string, start_position, [length]): Returns part of a value, based on a position and length.

Create Table

Create Table	CREATE TABLE tablename (column_name data_type);
Create Table with Constraints	CREATE TABLE tablename (column_name data_type NOT NULL, CONSTRAINT pkname PRIMARY KEY (col), CONSTRAINT fkname FOREIGN KEY (col) REFERENCES other_table(col_in_other_table), CONSTRAINT ucname UNIQUE (col), CONSTRAINT ckname CHECK (conditions));
Create Temporary Table	CREATE GLOBAL TEMPORARY TABLE tablename (colname datatype) ON COMMIT DELETE ROWS;
Drop Table	DROP TABLE tablename;

Alter Table

Add Column	ALTER TABLE tablename ADD columnname datatype;
Drop Column	ALTER TABLE tablename DROP COLUMN columnname;
Modify Column	ALTER TABLE tablename MODIFY columnname newdatatype;
Rename Column	ALTER TABLE tablename RENAME COLUMN currentname TO newname;
Add Constraint	ALTER TABLE tablename ADD CONSTRAINT constraintname constrainttype (columns);
Drop Constraint	ALTER TABLE tablename DROP constraint_type constraintname;
Rename Table	sp_rename 'old_table_name', 'new_table_name';

Window/Analytic Functions

```
function_name ( arguments ) OVER (  
  [query_partition_clause]  
  [ORDER BY order_by_clause  
  [windowing_clause] ] )
```

Example using RANK, showing the student details and their rank according to the fees_paid, grouped by gender:

```
SELECT  
student_id, first_name, last_name, gender, fees_paid,  
RANK() OVER (  
  PARTITION BY gender ORDER BY fees_paid  
) AS rank_val  
FROM student;
```

Subqueries

Single Row	SELECT id, last_name, salary FROM employee WHERE salary = (SELECT MAX(salary) FROM employee);
Multi Row	SELECT id, last_name, salary FROM employee WHERE salary IN (SELECT salary FROM employee WHERE last_name LIKE 'C%');

SQL Server Cheat Sheet

SELECT Query

```
SELECT col1, col2
FROM table
JOIN table2 ON table1.col = table2.col
WHERE condition
GROUP BY column_name
HAVING condition
ORDER BY col1 ASC|DESC;
```

SELECT Keywords

DISTINCT: Removes duplicate results	SELECT DISTINCT product_name FROM product;
BETWEEN: Matches a value between two other values (inclusive)	SELECT product_name FROM product WHERE price BETWEEN 50 AND 100;
IN: Matches to any of the values in a list	SELECT product_name FROM product WHERE category IN ('Electronics', 'Furniture');
LIKE: Performs wildcard matches using _ or %	SELECT product_name FROM product WHERE product_name LIKE '%Desk%';

Joins

```
SELECT t1.*, t2.*
FROM t1
join_type t2 ON t1.col = t2.col;
```

Table 1	Table 2
A	A
B	B
C	D

INNER JOIN: show all matching records in both tables.

A	A
B	B

LEFT JOIN: show all records from left table, and any matching records from right table.

A	A
B	B
C	

RIGHT JOIN: show all records from right table, and any matching records from left table.

A	A
B	B
	D

FULL JOIN: show all records from both tables, whether there is a match or not.

A	A
B	B

```

Modifying Data

Insert	INSERT INTO tablename (col1, col2...) VALUES (val1, val2);
Insert from a Table	INSERT INTO tablename (col1, col2...) SELECT col1, col2...
Insert Multiple Rows	INSERT INTO tablename (col1, col2...) VALUES (valA1, valB1), (valA2, valB2), (valA3, valB3);
Update	UPDATE tablename SET col1 = val1 WHERE condition;
Update with a Join	UPDATE t SET col1 = val1 FROM tablename t INNER JOIN table x ON t.id = x.tid WHERE condition;
Delete	DELETE FROM tablename WHERE condition;

Indexes

Create Index	CREATE INDEX indexname ON tablename (cols);
Drop Index	DROP INDEX indexname;

Set Operators

UNION: Shows unique rows from two result sets.

UNION ALL: Shows all rows from two result sets.

INTERSECT: Shows rows that exist in both result sets.

MINUS: Shows rows that exist in the first result set but not the second.

Aggregate Functions

- SUM: Finds a total of the numbers provided
- COUNT: Finds the number of records
- AVG: Finds the average of the numbers provided
- MIN: Finds the lowest of the numbers provided
- MAX: Finds the highest of the numbers provided

Common Functions

- LEN(string): Returns the length of the provided string
- CHARINDEX(string, substring, [start_position], [occurrence]): Returns the position of the substring within the specified string.
- CAST(expression AS type [(length)]): Converts an expression to another data type.
- GETDATE: Returns the current date, including time.
- CEILING(input_val): Returns the smallest integer greater than the provided number.
- FLOOR(input_val): Returns the largest integer less than the provided number.
- ROUND(input_val, round_to, operation): Rounds a number to a specified number of decimal places.
- REPLACE(whole_string, string_to_replace, replacement_string): Replaces one string inside the whole string with another string.
- SUBSTRING(string, start_position, [length]): Returns part of a value, based on a position and length.

Create Table

Create Table	CREATE TABLE tablename (column_name data_type);
